

BLACK WIDOW®

TOUR™

— FEATURING —

Adjustable Support Ring

New Support Rings allow golfers to select the comfort setting that best fits their game. Black Widow Tour cleats come pre-set with the Support Ring behind the cushioning towers, providing extreme traction through maximum flex and ultimate comfort. For a firmer, “spike-like” feel, remove the Support Ring from behind the cushioning towers and lock into place behind the flexible legs.

— ALSO FEATURING —

Self-Adjusting Traction

4 Large Flexible Legs

4 Large Flexible legs first contact the terrain and provide a spring-like effect. The 4 Large Flexible Legs are engineered to absorb initial impact and distribute force throughout the cleat, providing the cushioned feel engineered in all Softspikes products.

Green-Friendly Pads

Black Widow Tour cleats follow in Softspikes heritage of providing superior green-friendliness. The 4 large Flexible Legs are equipped with non-marring pads that glide across greens minimizing damage.

Fast Twist® Insert System

PrideSports' patented Fast Twist Insert System, the lightest weight cleat changing system in golf, was designed to make cleat changing quick and easy. A simple quarter turn of a cleat wrench deadlocks cleats into place with a double click, while a reverse quarter turn unlocks the cleats for quick changing.

4 Cushioning Towers

4 Cushioning Towers absorb and distribute secondary impact loads with greater resistance, reducing cleat compression. The cushioning towers begin to distribute the golfer's weight into the 8 traction elements.
